

Letter of Intent

Prof. Shoji Nagamiya
J-PARC Project Director

Dear Shoji,

This letter comes to express our intension to have a branch of Laboratory of Nuclear Studies of Osaka University (OULNS) at coming J-PARC. OULNS has many research groups working on particle and nuclear physics. Their activity is high and has strong relation to physics at coming J-PARC. I would like to list names of professors with their research fields.

Tadafumi Kishimoto:	Physics with Strangeness and neutrino physics with double beta decay
Yoshitaka Kuno:	PRISM and neutrino factory
Taku Yamanaka:	Rare K decay and CP violation
Tadanori Minamisono:	Symmetry in nuclear physics and spin physics
Tadasi Shimoda:	Unstable Nuclei and spin physics
Masaharu Nomach:	Instrumentation and Data acquisition system
Atsushi Shinohara:	Radio chemistry and pion capture

There are associate professors who are also quite active on the relevant fields. I believe you can find many names who are strong potential uses of the J-PARC facility. It is expected that future experiments at J-PARC require many construction works. In that case some of our staff members will have to stay appreciable amount of time at J-PARC. Under this circumstances we would like to ask your consideration to have a branch of OULNS where we can have almost same activities as staff members of J-PARC.

Sincerely yours,

Tadafumi Kishimoto
Director,
Osaka University Laboratory of Nuclear Studies (OULNS)
