

Warm magnets and the remote handling system in the J-PARC beam line

E. Hirose, K. H. Tanaka, Beam
Channel Group

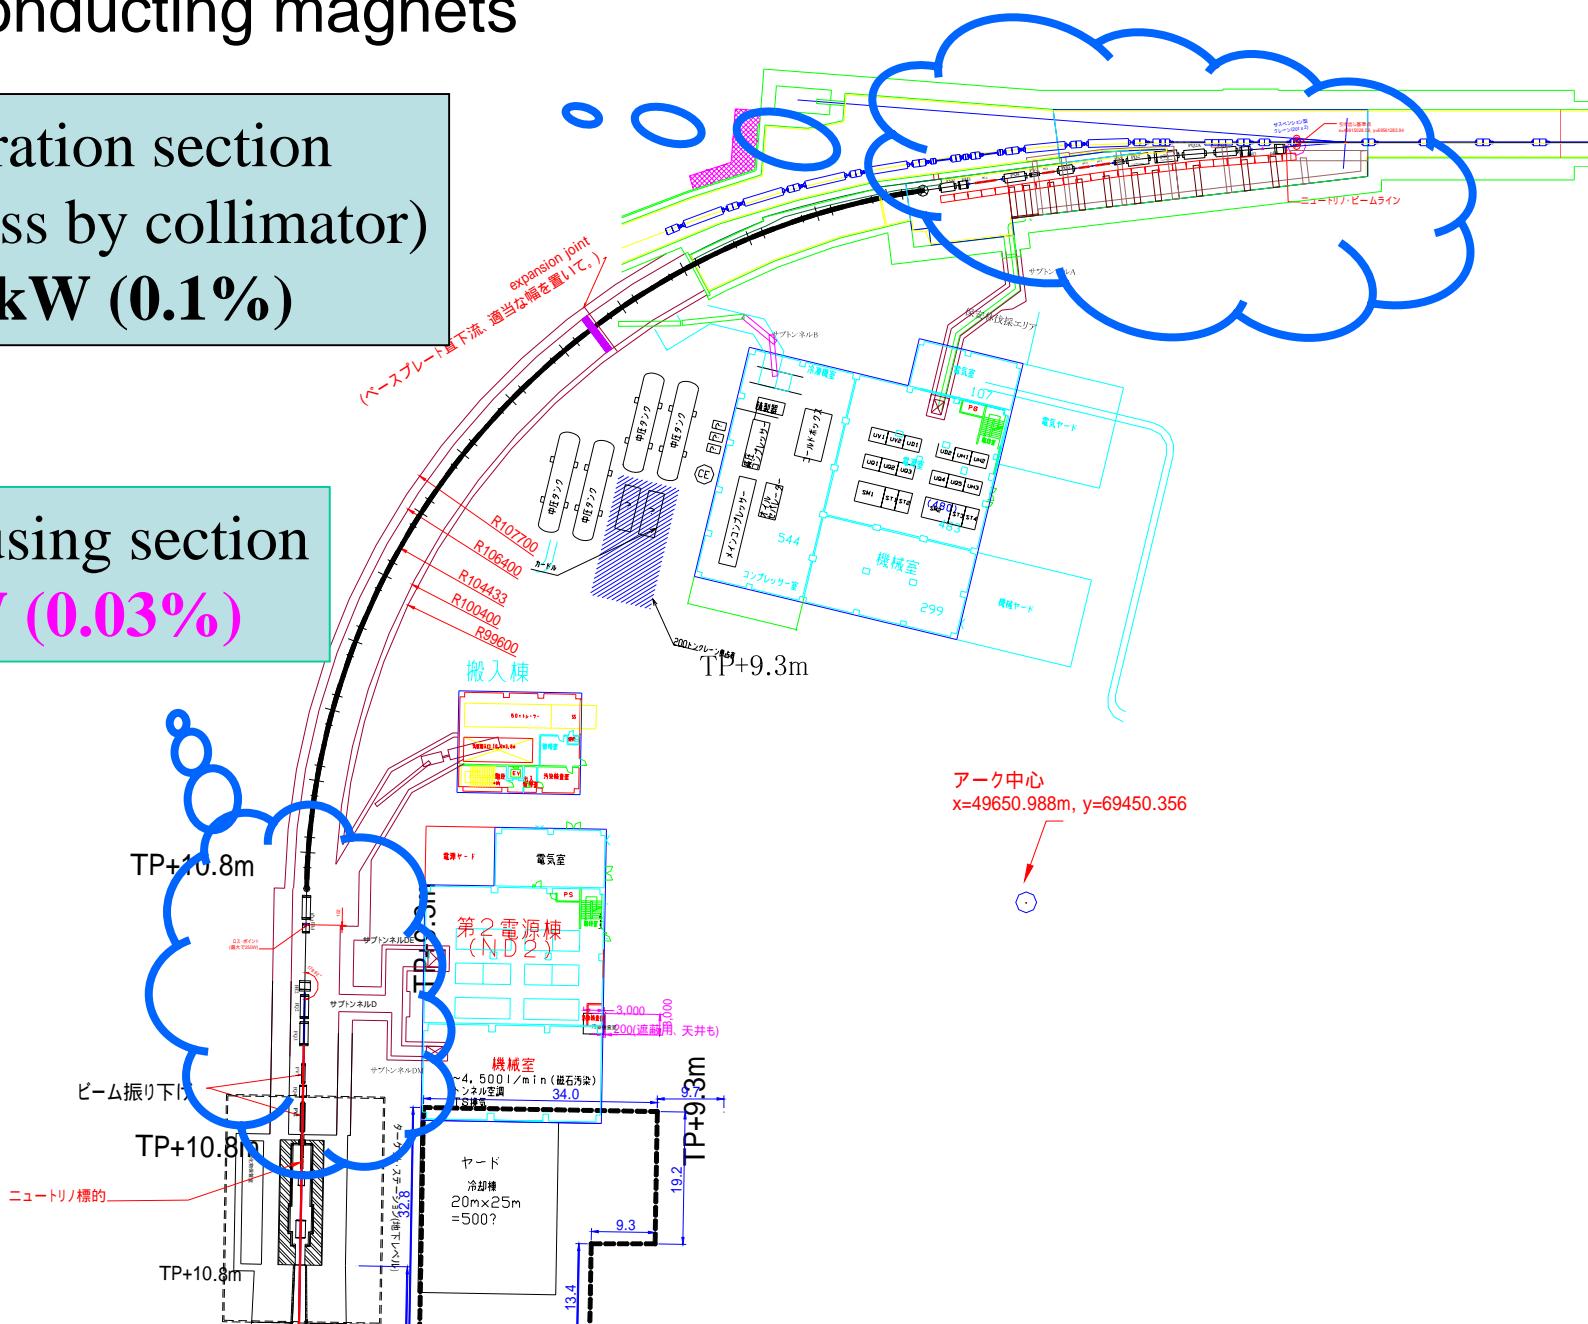

Contents

- Normal conducting magnet
 - floor plan for normal conducting magnet
 - Specification of magnets
 - Polyimide and MIC Magnets
- Quick disconnection and installation system
 - Remote hanging apparatus
 - Quick alignment and installation system
 - Cooling water connector

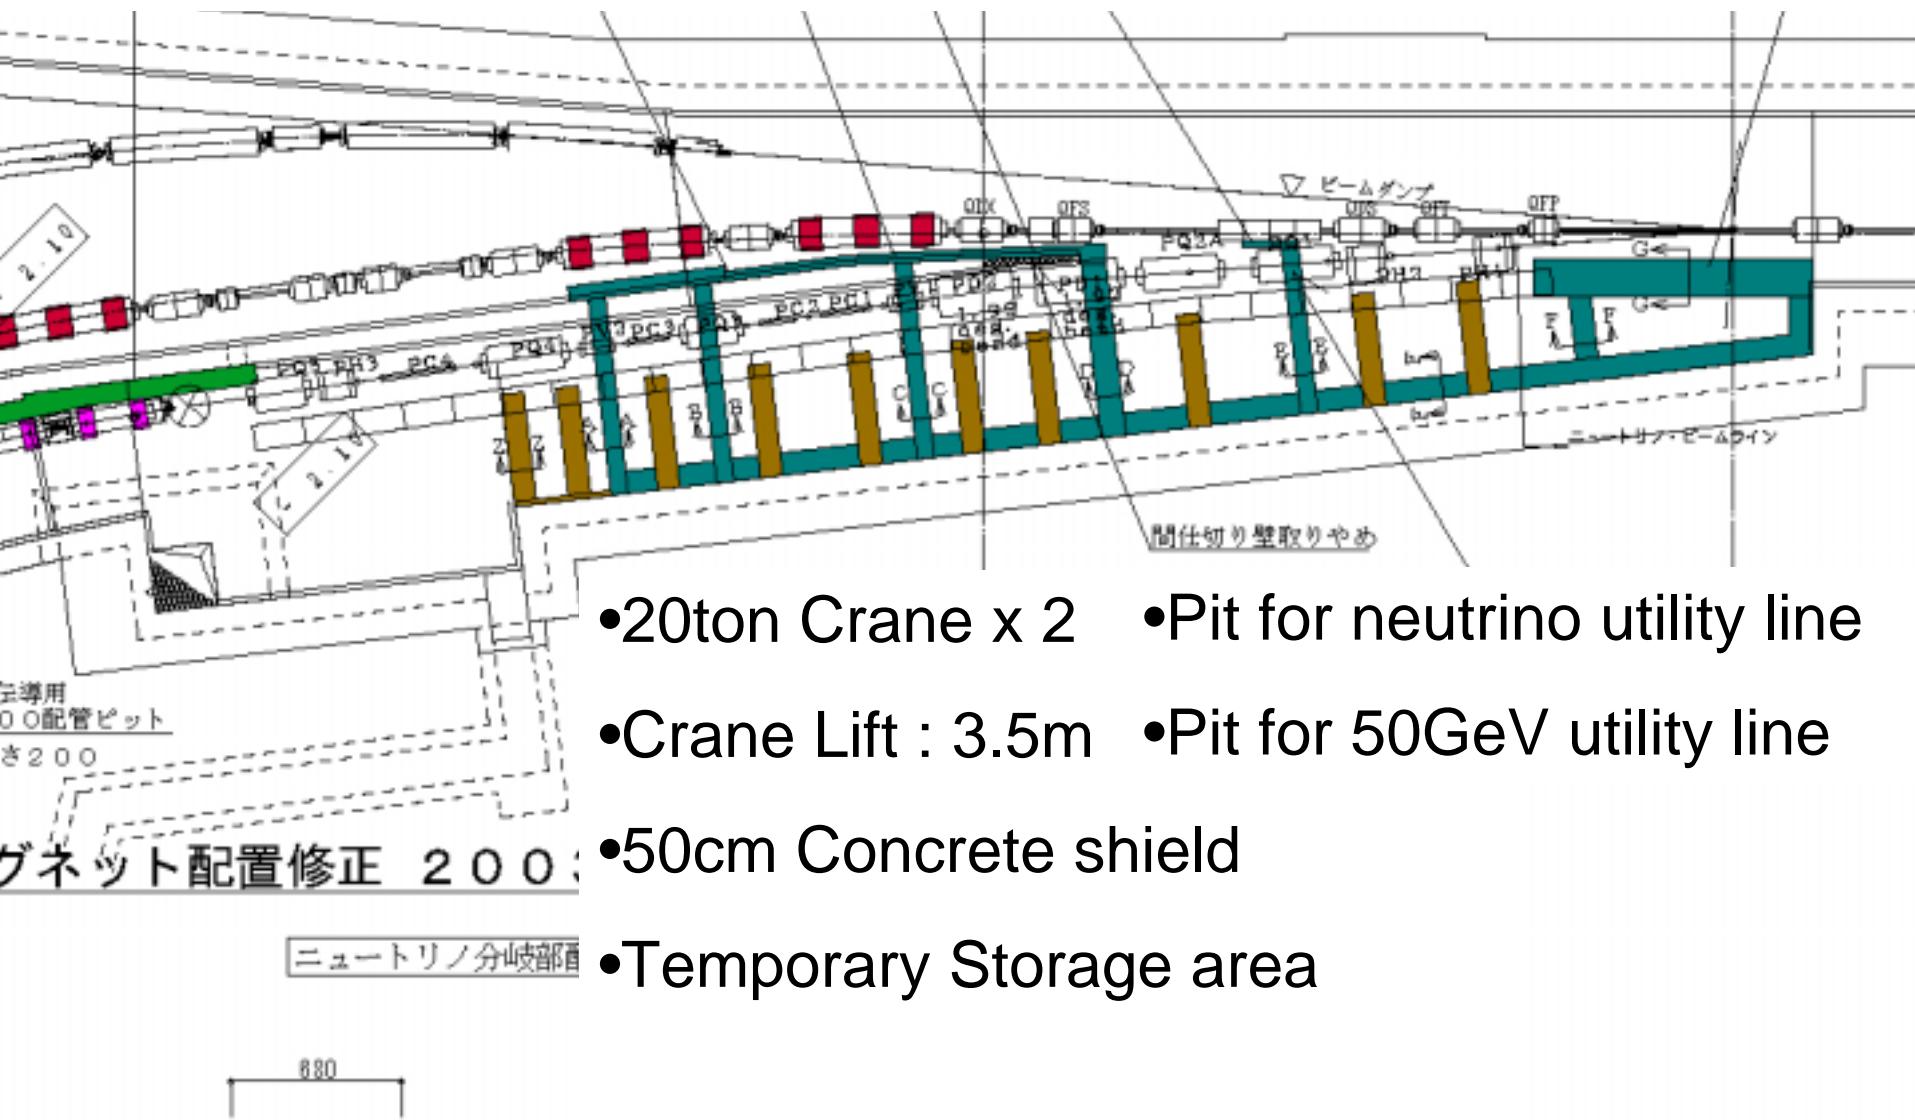

Normal conducting magnets

Preparation section
(ctrl'ed loss by collimator)
0.75kW (0.1%)

Final Focusing section
0.25kW (0.03%)

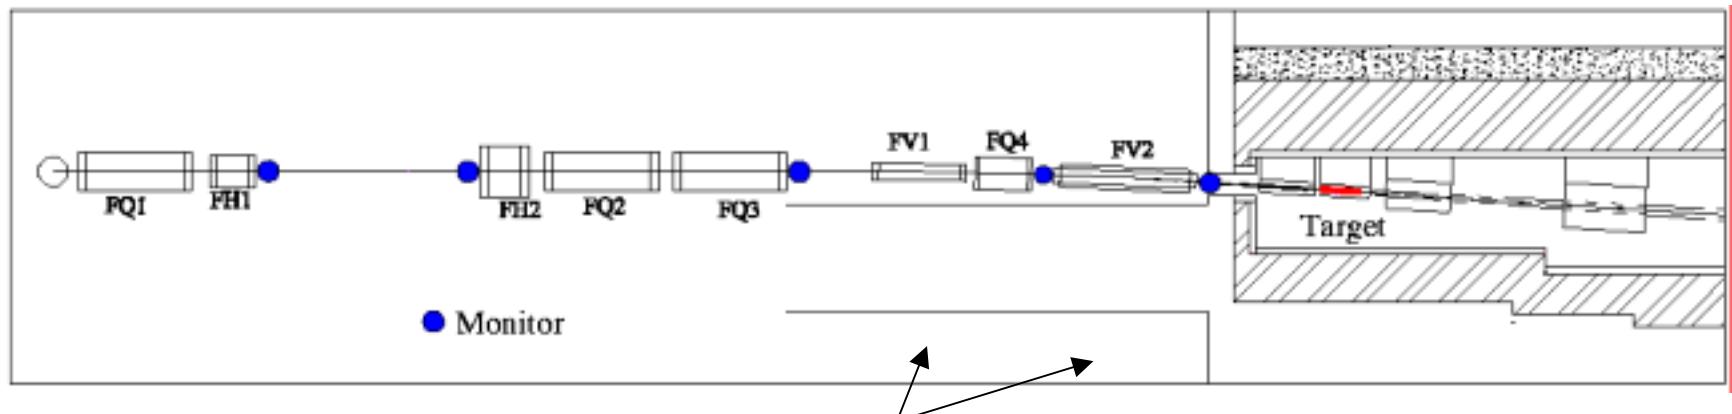

preparation section

Focusing Section

- We started to design the floor plan in detail.
- Design scheme is almost the same as that of preparation section.
- 20ton crane x 2, tunnel width : 2m+6m, pit for utility line, 50cm shield, etc...

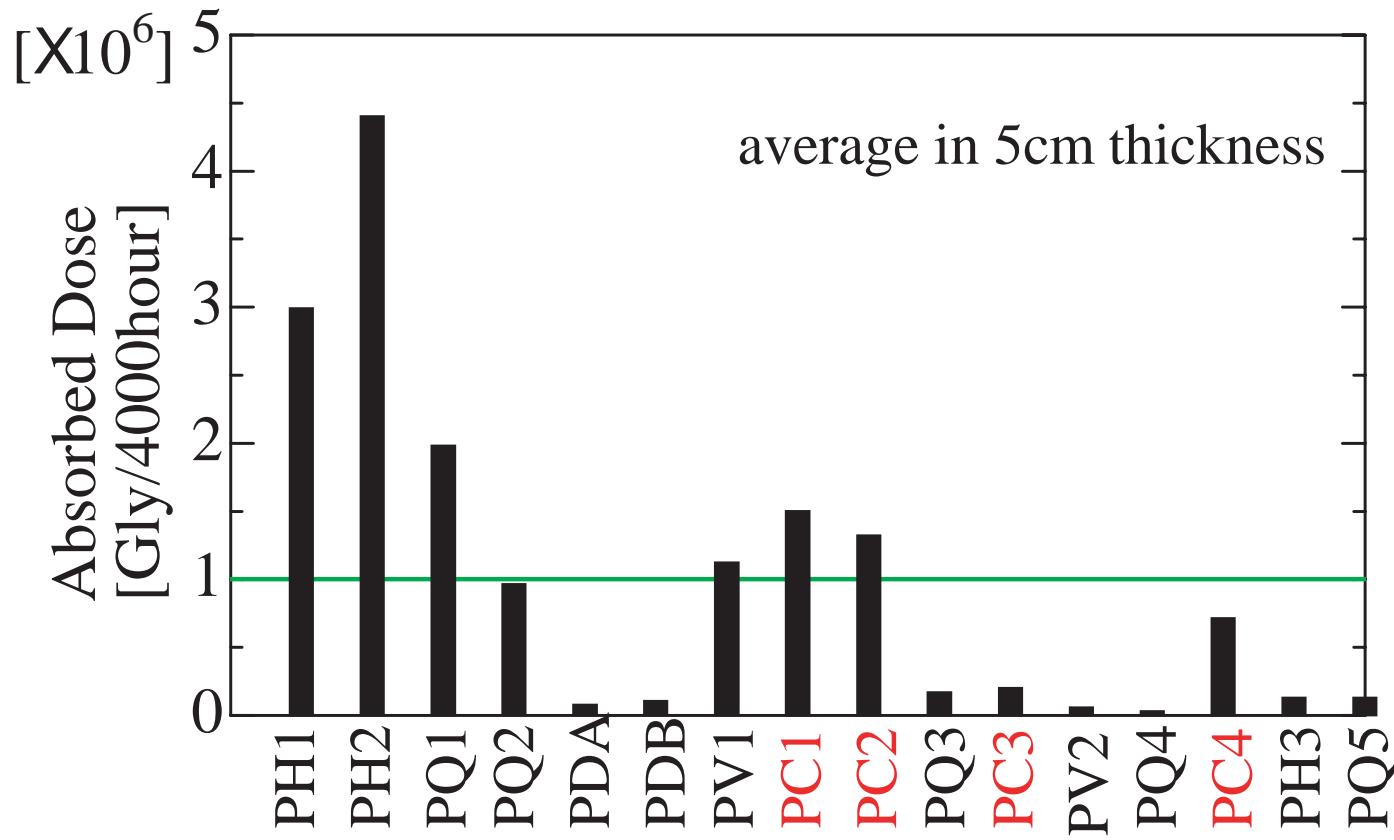

Vertical steering magnet
Change off-axis angle w/ this.

Summary of the J-PARC beam line warm magnets

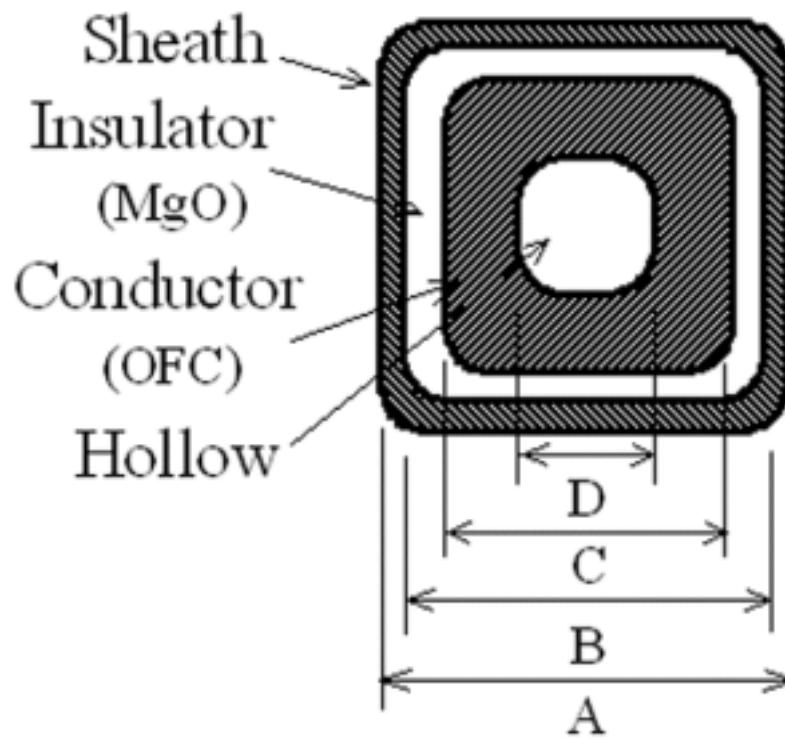

No.	Name	Magnet Type	Optical Gap[mm]		Magnetic Field[Tesla]		Length	Magnet Gap[mm]		Outward form[mm]			Maximum rationg			Normal Operation			Weight
			V	H	operate	max rating		[mm]	V	H	W	H	L	[A]	[V]	[kW]	[A]	[V]	[kW]

Radiation dose at the magnets in Preparation Section (Tanabe-kun)

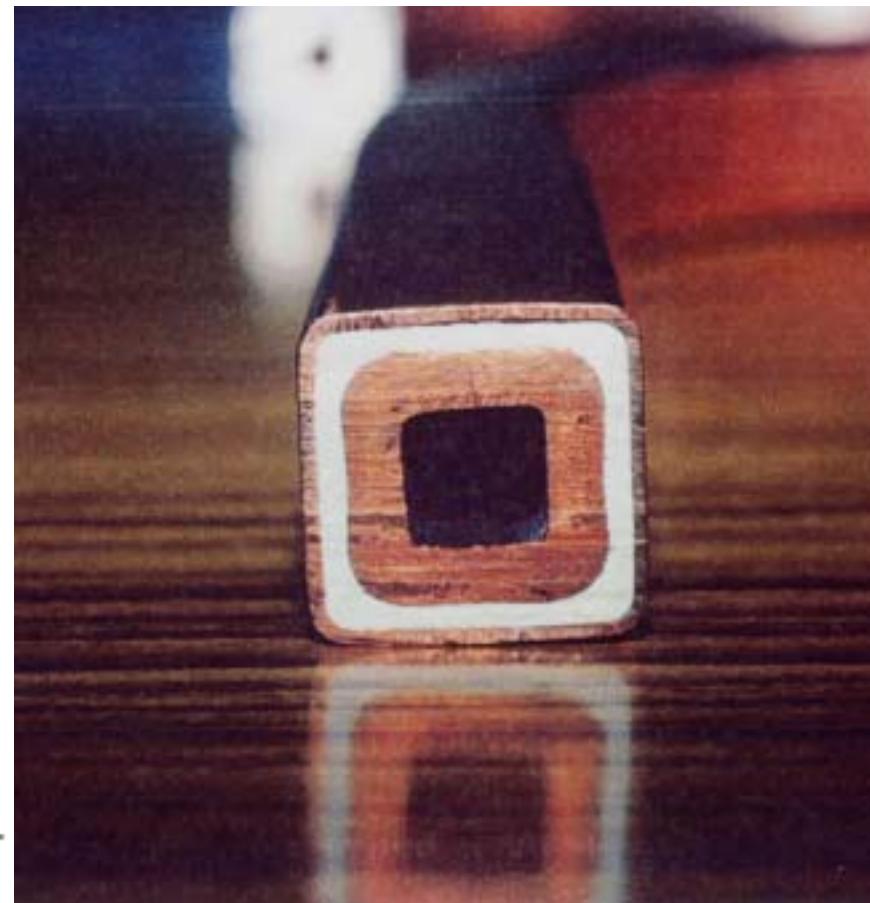

- Typical magnets for JPARC- ν beam line
- Q460
 - Insulator : Polyimide ~ 10^{**8} Gy
 - Bore diameter : 20cm
 - Length : 3m
 - Current : 2500A
 - Voltage : ~ 160V
 - Weight : 32ton
- Q440MIC
 - Insulator : MgO ~ 10^{**11} Gy

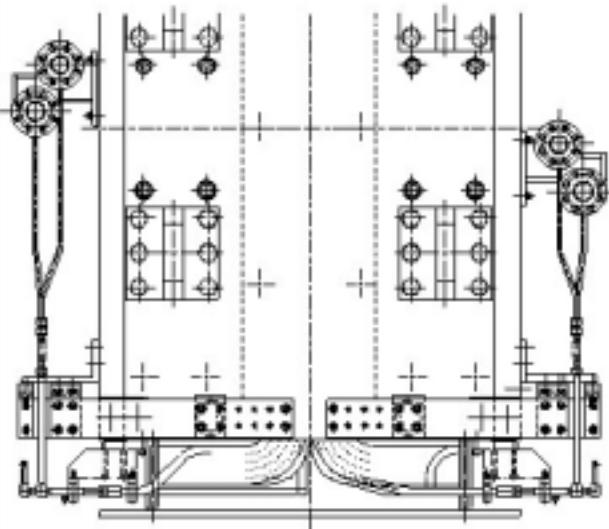

Status of Mineral Insulation Cable

Nominal Current (A)	2000	2500	3000	1000*	2000*
Dimensions (mm)					
A: Outward Size	20.0	23.8	28.0	18.0	14.0
B: Insulator Size	18.0	21.6	25.0	16.6	12.6
C: Conductor Size	14.6	18.0	20.0	13.2	9.2
D: Hollow Size	7.4	10.0	10.0	--	--
Cross Section (mm ²)					
Conductor	150.9	211.7	293.1	168.4	78.8
Insulator	117.7	153.2	227.4	106.6	79.4
Sheath	73.4	95.3	150.6	47.8	36.6

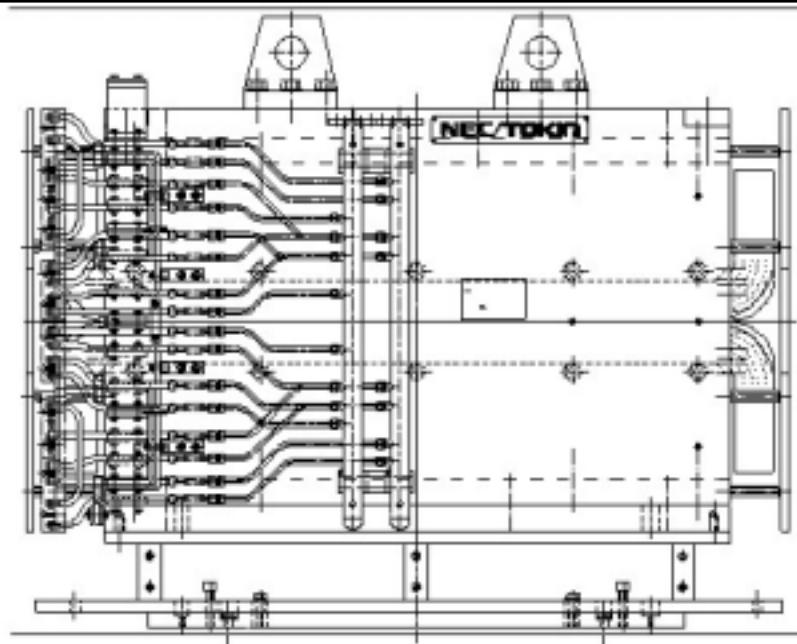

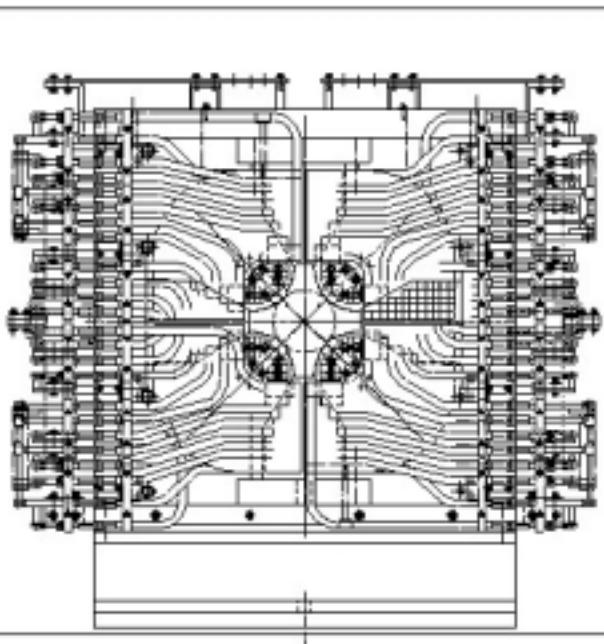

* indicates Solid Conductor MICs. No hollow is in Cu conductor.

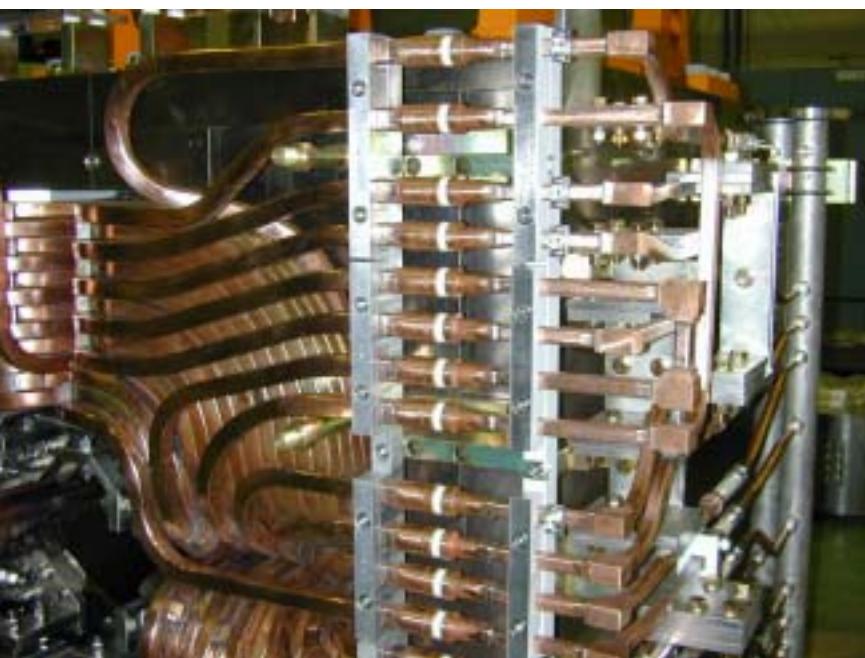

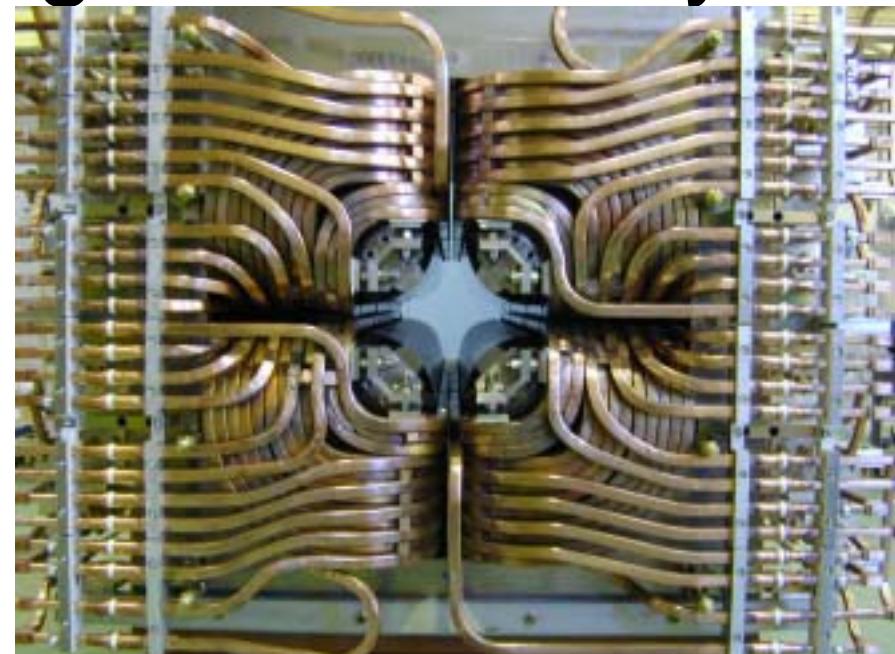

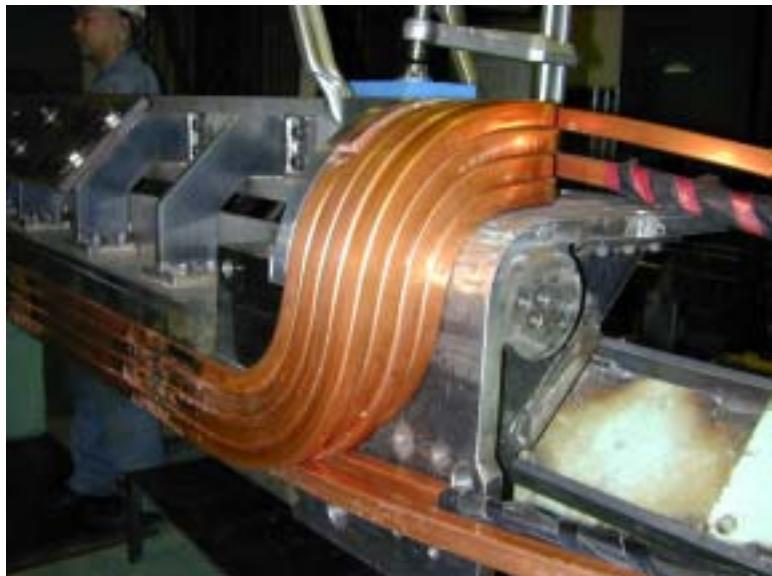

Construction of actual magnet

Q440MIC

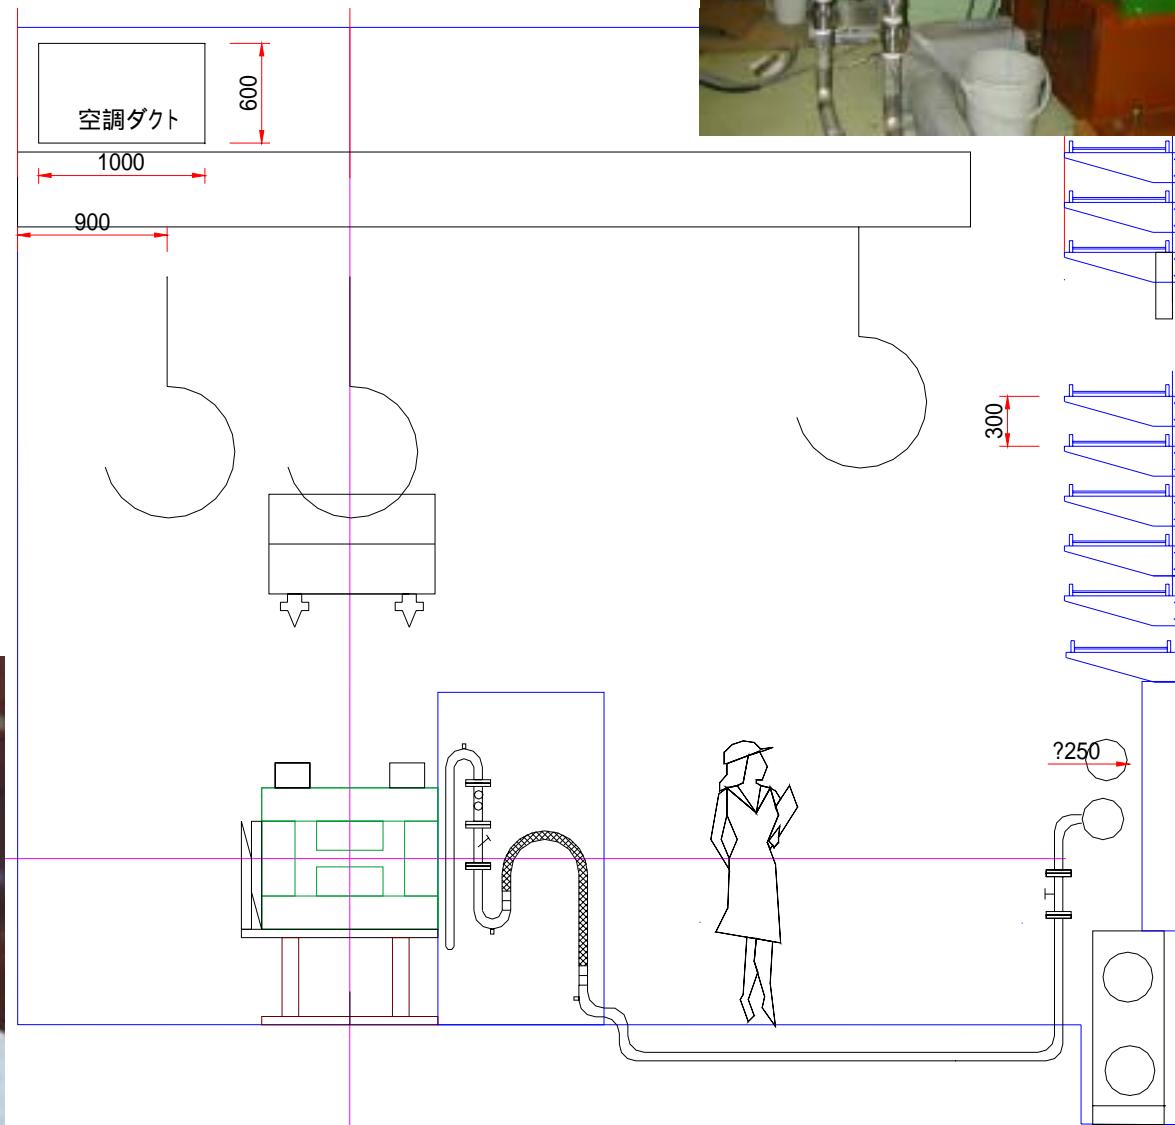

- 20cm bore diam., 200cm pole length
- 43T/pole, 1.3T@pole
- Nominal current/voltage=2200 A/200V
- Cooling water=290 L/min. @ 1MPa
- Cooling water Temp. rise=30
- Approximate Weight=33ton

Q440MIC Magnet Assembly

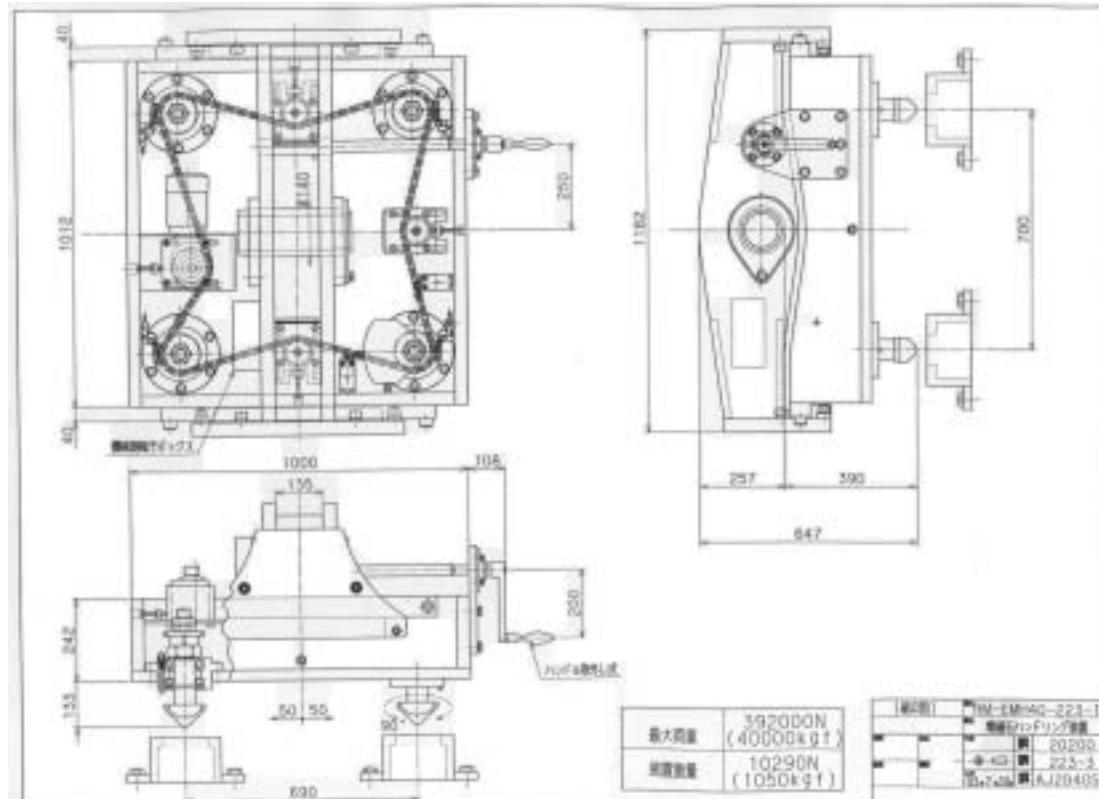

Cross section of the normal conduction magnet tunnel

The development of “Twist-lock” (an automatic sling apparatus)

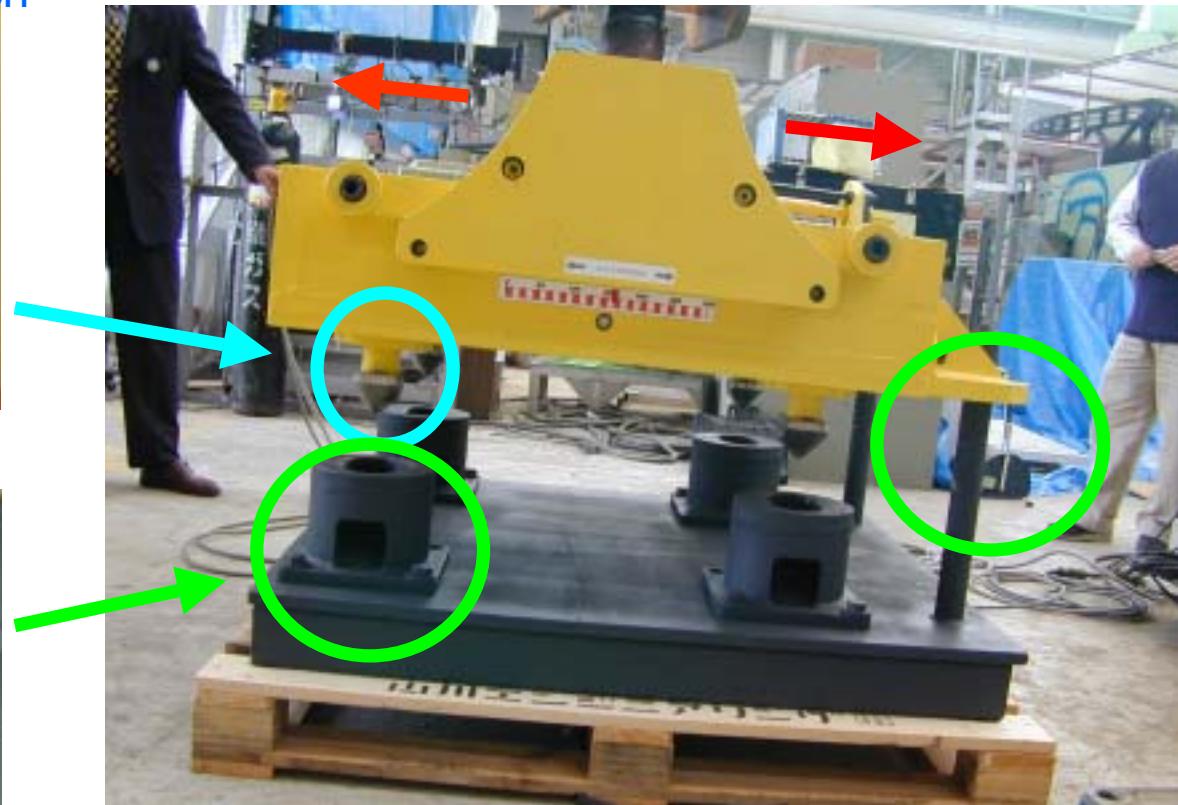

- Specification
 - Slinging remotely
 - Maximum load : 40 ton
 - Four point connection
(the fewer, the better)
 - The distance of each point : ~ 700mm
 - Height of the apparatus : within 1m
 - Electrical power operation
 - Interlock system
 - Balancing mechanism

Corner fitting

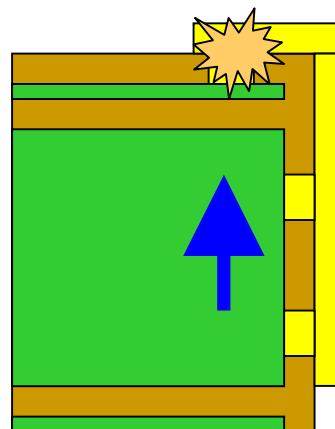

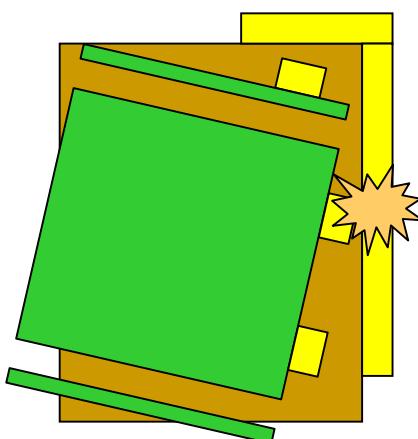

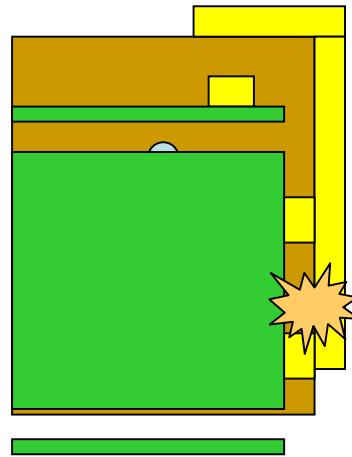

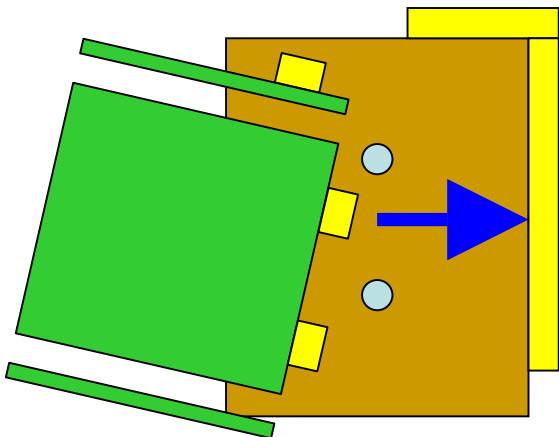

4 twist locks turned by the chain driven electric motor, simultaneously.

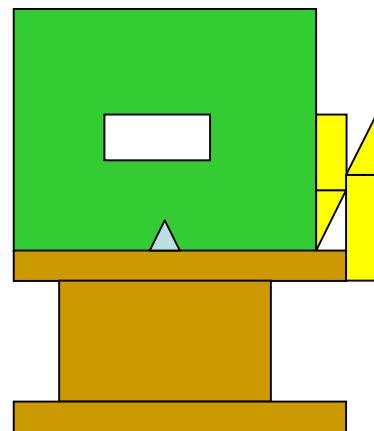

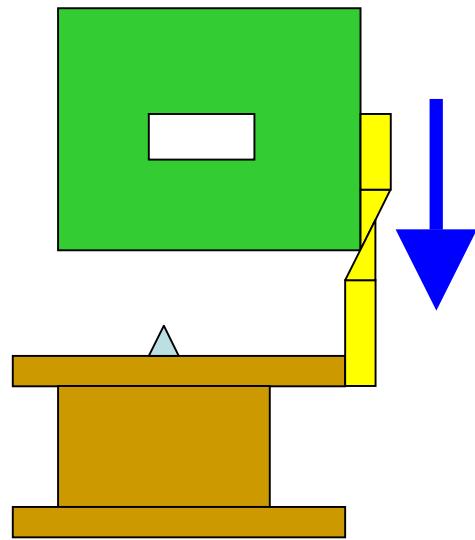

Remote Controller

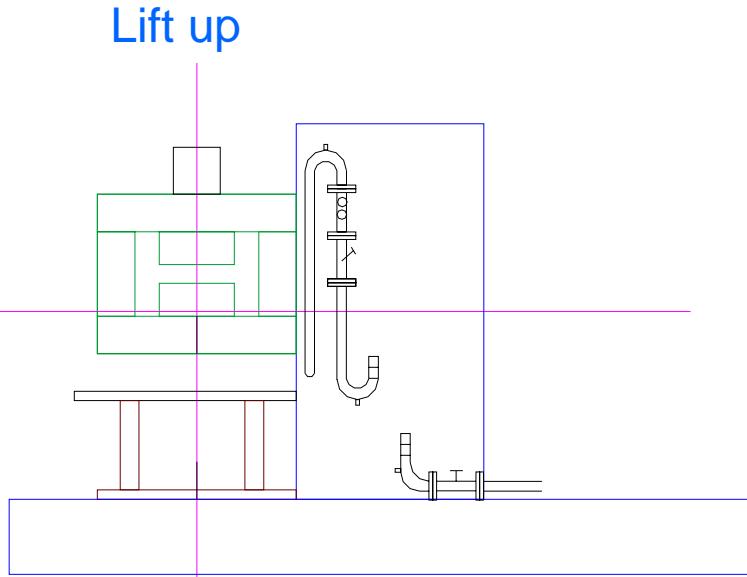

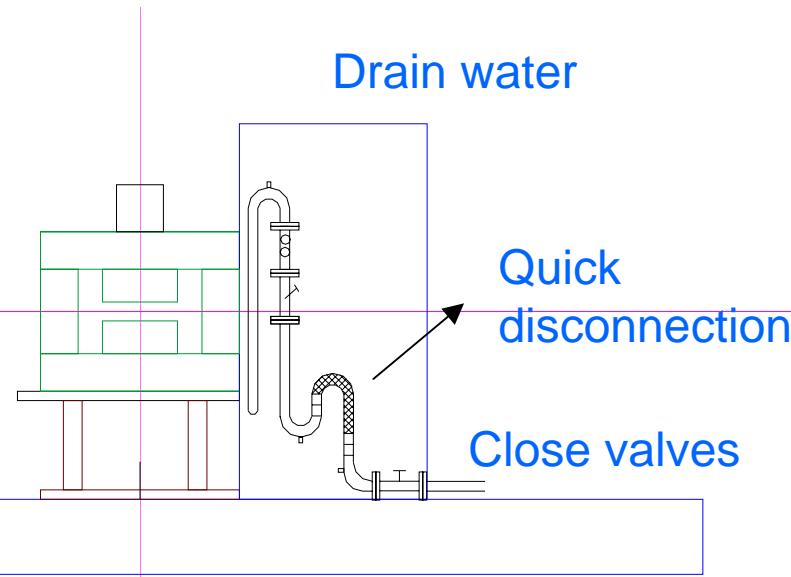

Quick alignment guide

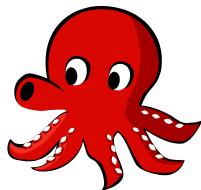

Connector of the cooling water

- Normal operation with 20 atm (2.0 MPa)
- Normal operation temperature : 15 ~ 80
- Pure water
- Two inch. Diameter
- Metal gasket
- The amount of leakage in case disconnection : 100ml/once
- The amount of time necessary for connection/disconnection by hand : 30sec/one circuit

Metal sealed lever coupler

- Using metal seal instead of rubber one
 - With 4 levers
 - Long lever
 - Fine tuning system for alignment

	H [mm]	T [mm]	material	Leakage test of Nitrogen with 3Mpa	Leakage test of Water with 3MPa
Metal hollow O-ring	2.4	0.25	SUS321 with silver coating	No leak	No leak
Metal C-ring	2.4		Inconel X75 with silver coating	Small leak	No leak
Metal E-ring	2.6		Inconel718 with silver coating	Small leak	No leak

“Drain trap” type

“Elephant nose” type

Mock up test will be done soon.

Water lock

Ball valves used for steam or viscous fluid piping on the market

Gasket material : metal, graphite, asbestos

KITZ Ball valve

Summary

- In the preparation section the floor plan design fixed.
- The technology of radiation resistant magnets is established.
- Each tools for quick disconnection and quick installation will be establish soon.
- Total test will be done at the mock up.

Schedule

	2005	2006	2007	2008
Preparation Section (12Magnets)	Design	Production	Installation Piping Total test	
Final Focus section (8 Magnets)		Design	Production	Installation Piping Total test

Electric power connector

- 3000 A
